

Single-step counterfactual editing(inference)

Diseased image

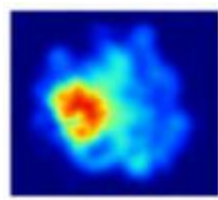

x_{dis}

Compute residual

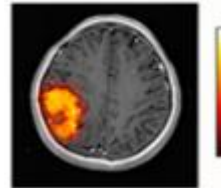

$R(x, t)$

Compute mask

$a(x, m)$

Control field

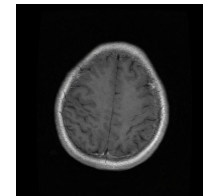

$\hat{u}_t(x) = a(x, m) R(x, t)$

Update(1 step)

$$x_{nor} = x_{dis} + \hat{u}_t(x)$$

Counterfactual normal

x_{nor}

λ : step-size scalar

- ✓ Consistent with p_{normal}
- ✓ Preserve global structure
- ✓ Lesion removed
- ✓ 1-NFE(efficient)
